

## **SCREENING GĦALL-MARDA TAS-COELIAC FIL-POPOLAZZJONI MALTJA**

Dan il-fuljett fih żewġ partijiet:

- **Ittra ta' informazzjoni li tispjega dwar il-proġett**
- **Čertifikat ta' kunsens (li inti bħala ġenitur/gwardjan tiffirma jekk taqbel li tipparteċipa)**

### **PARTI I: Ittra ta' informazzjoni**

Għażiż ġenitur/gwardjan,

Nixtieq ninfurmak li bħalissa qed isir studju fuq il-marda tas-Coeliac fost it-tfal u l-adoloxxenti Maltin. Dan qed isir sabiex din il-marda tkun magħrufa iktar u tinqabad f'perjodu fejn l-individwu jkun għadu ma żviluppax is-sintomi. B'hekk inkunu nistgħu nitrattaw il-marda b'mod iktar effettiv u mingħajr ħafna tbatija min-naħha tal-pazjent. Minn hawn nitolbu l-ghajnejn u l-kooperazzjoni tagħikkom sabiex tieħdu sehem f'dan l-eżerċizzju li jwassal għall-benefiċċju, sew għat-tifel jew tifla tagħikkom, kif ukoll għall-ġenerazzjonijiet futuri. L-informazzjoni li se tkun qed tingabar ha tkun miżmuma b'mod kunfidenzjali u inwiegħdu li ha nkunu qed inżommu mal-linji gwida hekk kif maħruġa mill-bord tal-etiqa.

### **Fiekk tikkonsisti din ir-riċerka?**

Dalwaqt, fl'iskola fejn jattendi/tattendi t-tifel/tifla tiegħek, ser issir sessjoni mmexxija minn persuna kwalifikata. F'din l-attività, din il-persuna ser tkun qed tieħu qatra demm mit-tifel jew tifla tiegħek permezz ta' labra apposta biex isir test fuqha. Waqt li jkun qed isir it-test, ser jingabar il-kwestjonarju li int tkun imlejt. It-test jagħti indikazzjoni jekk it-tifel jew it-tifla jistax ikollhom il-marda tas-coeliac. Jekk jiġi riżultat pozittiv, int se tkun infurmat/a u tiġi offrut biex isiru iktar testijiet l-isptar bħala out-patients. Inti tirriserva d-dritt li tieqaf tieħu sehem f'dan l-istudju fi kwalunkwe fażi tiegħu.

### **X'inhi l-marda coeliac?**

Din hija kundizzjoni fejn persuna ssir sensittiva għal proteina magħrufa bħala gluten. Din hija proteina li tinsab f'ikel bħal qamħ u ċereali u li soltu ma tagħmlx ħsara. F'persuna li tħalli bis-coeliac, din il-proteina twassal għal infjammazzjoni fil-musrana, li ma tibqax tassorbi l-minerali u n-nutrijenti li jittiekklu. Din il-marda tista' taffettwa individwi mit-tfulja sa ma jsiru adulti. Madanakollu, is-coeliac toħrog l-aktar fit-tfal u fl-adolexxenti. Sal-lum il-ġurnata, l-aktar mod effettiv biex tikkontrola din il-kundizzjoni huwa billi tieqaf milli tieħu gluten fid-dieta tiegħek. Huwa stmat li 1 minn kull 100 individwu huwa effettwat minn din il-marda, pero ħafna minnhom ma jkollhomx djanjożi korretta.

## X'inhuma s-sintomi ta' din il-marda?

L-iktar sintomi komuni ta' din il-marda huma dijarrea, dardir u remettar, uġiġħi ta' żaqq u nefha fiż-żaqq, nuqqas ta' aptit u diffikultà biex iżżejjid il-piż. Tista', madanakollu, ma jkollok xejn minn dan, imma jkollok sintomi oħra bħal anemija, mard fit-tirojde, problemi ta' mobbilta', dijabete u xi sinjali ta' nuqqas ta' vitaminu u minerali. Fl-adulti, din il-kundizzjoni tista' twassal għal žvilupp ta' ġerti tumuri fil-musrana. Meta mhux trattata, din il-kundizzjoni twassal għal iktar mard u kumplikazzjonijiet.

## Kif nista' nikkura din l-kundizzjoni?

Il-marda tas-coeliac tista' tiġi kkontrollata billi ma tiħux iktar gluten fl-ikel li tiekol. Dan iwassal sabiex il-musrana tirkupra u terġa' tibda sservi l-funzjonijiet tagħha. Dan iwassal biex jiġu evitati kumplikazzjonijiet li huma assoċjati ma' din il-kundizzjoni. Persuni li jbatu mis-coeliac huma eligibbli għall-ġħajnejha mill-istat biex jixtru prodotti mingħajr gluten. Hemm ukoll ħafna għajnejha minn għaqdien tas-coeliac.

## X'inhuma l-benefiċċji li joħorġu minn dan l-istudju?

Qed noffru li nagħmlu dan it-test b'xejn biex ngħinukom tindunaw bil-marda u b'hekk tieħdu l-kura li hemm bżonn fi stadju fejn forsi l-ħsara fil-musrana tkun għadha fil-bidu. B'hekk, ikollkom iċ-ċans tevitaw kumplikazzjonijiet għal uliedkom.

L-ġħan aħħari huwa li dan l-istudju ser jgħinna nifhmu aktar din il-marda fil-kuntest tal-popolazzjoni Maltija. Dan ħa jgħin biex jitfassal pjan ta' 'screening' għal din il-marda biex fil-ġejjeni nnaqqsu l-impatt ta' din il-marda fuq is-saħħha tat-tfal u l-adulti, u b'hekk intejbu l-kwalità tal-ħajja tal-poplu Malti. Tistgħu ssibu iktar informazzjoni dwar dan il-proġetti fuq is-sit elettroniku tagħna [www.itamaproject.eu](http://www.itamaproject.eu).

Għalhekk nixtiequ nitolbukom ġentilment li tagħtu l-kunsens tagħkom biex it-tifel/tifla tagħkom jipparteċipa/tipparteċipa f'dan l-istudju billi timlew iċ-ċertifikat ta' kunsens u l-kwestjonarju li jinsabu fil-paġna tan-nofs ta' dan il-fuljett, taqilgħuha u tibagħtuha lura l-iskola. Jekk għandkom xi dubji jew domandi, tistgħu tibagħtu ittra elettronika fuq [info@itamaproject.eu](mailto:info@itamaproject.eu).

Dejjem tagħkom,

**PARTI II: Čertifikat tal-Kunsens u Kwestjonarju biex jumtlew mill-ġenituri/gwardjani tat-tfal u jiġu rritornati l-iskola.**

**Čertifikat tal-Kunsens**

Jien ġejt mistieden/mistedna biex nawtorizza lil ibni/binti jieħu/tieħu sehem fir-riċerka fuq il-marda tas-coeliac. Jiena qrajt, jew qrawli, l-informazzjoni li ġiet ipprovduta lili u ngħatali č-ċans li nistaqsi l-mistoqsijiet li kelli fejn dawn twieġbu b'mod sodisfaċenti. Jiena volontarjament nagħti l-kunsens tiegħi biex ibni/binti jipparteċipa/tipparteċipa f'dan l-istudju.

## **SCREENING FOR COELIAC DISEASE IN THE MALTESE POPULATION**

**This Informative Consent Form has two parts:**

- **Information Sheet (to share information about the study with you)**
- **Certificate of Consent (to sign if you agree that your child may participate)**

### **PART I: Information Sheet**

Dear parent/guardian,

We would like to inform you that we will be studying coeliac disease in the Maltese paediatric population with the intent of profiling the disease and developing a reliable way of diagnosing this disease at an early stage, even before the full symptoms develop. We hereby ask for your help by participating in this research which will benefit your child and future generations to come. The results of the research will be confidential, and we will abide by the ethics and medical committee's regulations in conducting such research.

#### **What does the research consist of?**

Specially trained personnel will be visiting the school your child attends. They will collect the attached questionnaire and consent forms and if you give us your consent, will perform the test. The test involves taking a small drop of blood from your child's finger. We shall be using a special device to prick your child and obtain a drop of blood. The test will give a positive or negative result. If, the result is positive, you shall be informed and offered further testing at hospital. You may at any point, opt out of this exercise.

#### **What is coeliac disease?**

Coeliac disease is a condition which occurs when people become sensitive to a protein called gluten in their diet. Gluten is found in wheat and other cereals and is normally a harmless part of the food we eat. However, if you have coeliac disease, gluten damages the lining of the small intestine causing problems with the absorption of nutrients and vitamins. Coeliac disease can be diagnosed at any age, from infancy to old age, but it is most commonly seen in children and young adults. The treatment, which is usually very successful, is to remove all sources of gluten from the diet. It is estimated that the disease affects about 1 in 100 individuals; however, in the vast majority of cases, it is misdiagnosed.

MINISTRY FOR HEALTH

PARLIAMENTARY SECRETARIAT

FOR EUROPEAN FUNDS AND SOCIAL DIALOGUE

## **What symptoms might I expect with coeliac disease?**

Coeliac disease typically presents with diarrhoea, poor weight gain, vomiting, abdominal bloating and decreased appetite. Atypical presentations may also occur such as skin rashes, thyroid disease, diabetes, movement disorders, anaemia and possibly signs of nutrient malabsorption. In an older age group, it might also present with certain types of intestinal tumours. Besides this, it is known that an untreated coeliac has higher morbidity and mortality when compared to a healthy individual.

## **How is coeliac disease managed?**

Up to now, the only effective way of managing coeliac disease is to start and remain on a gluten free diet. This will promote intestinal recovery and prevent the possible complications which are associated with the disease. The state will also help affected individuals by sponsoring gluten free foods and flour. Besides this, there are a number of associations that help individuals cope with the disease.

## **What are the benefits of this study?**

The participants in this study will have the opportunity to be tested for coeliac disease free of charge. If an individual is found to have the disease, early diagnosis would mean that treatment can be started earlier, at a point when the damage to the intestines may still be limited and hence avoid possible complications associated with the disease.

Finally, this study will help us understand the disease within the context of the Maltese population so as to be able to set up a screening program for future generations. This will reduce morbidity, improve resource distribution and improve the quality of life of the Maltese population. You may find more information about this project on [www.itamaproject.eu](http://www.itamaproject.eu).

For this reason, we kindly ask you to give your consent for your child to participate in this study by filling in and signing the consent certificate and questionnaire found in the middle of this leaflet. The completed document is to be returned to the school. If you have any doubts or questions, please send an email to [info@itamaproject.eu](mailto:info@itamaproject.eu)

**Yours sincerely,**

**PART II: Certificate of Consent and Questionnaire to be filled in by parent/legal guardian of child and returned to school**

**Certificate of Consent**

I have been invited to allow my child to participate in a research on coeliac disease. I have read the foregoing information, or it has been read to me. I had the opportunity to ask questions about it, which have been answered to my satisfaction. I consent voluntarily for my child to participate in this study.
